# DAMAGE CONTROL... FROM HEAD TO TOE

READY TO REVISE YOUR SKIN? **DMK** CAN HELP YOU RECLAIM THE SKIN YOU WERE BORN WITH – WITH THEIR ADVANCED REMODELLING PROCEDURES. ISMAY VOSPER REPORTS.

In a world where consumers want results yesterday, it's no surprise so many men and women are opting for the 'quick fix' when it comes to revising ageing skin. The good news is that with DMK getting great results doesn't mean going under the knife.

DMK's advanced Remodelling Procedures (RP) have the potential to reveal the real you. No needles, no incisions – just younger, fresher and clearer looking skin. RP can be used to revise most skin concerns, including sun damage, wrinkles, fine lines, pigmentation and scarring, all of which can lead to a prematurely aged appearance.

Consistent with the DMK philosophy of working with the chemistry of the body, RP looks at the causative factors of premature ageing. Sun damage, as well as uneven pigmentation commonly found on the arms, backs of the hands, décolleté and legs is actually a sign of poor functionality within the skin. To resolve it, we need to understand why the skin is functioning this way and change the architecture of the skin to help it return to a healthy state. It's vital to look at how the damage occurs and take action to revise the skin from the inside out.

## How it works

RP involves applying a solution to the face in a series of layers that is then left on the skin overnight. The use of a

low-level laser as well as Enzyme Therapy treatments are incorporated to complete the cycle of REMOVE, REBUILD, PROTECT and MAINTAIN. The solution helps to rebuild a stronger, healthier skin, as well as gradually allowing the top layer of skin to lift away to reveal a clearer, younger and healthier looking complexion. RP aims to have an immediate effect on cross-linked wrinkles, fine lines, pigmentation, freckles and uneven skin tone.

This stage of removal is necessary in order to shed the outer layer of dead skin cells. The skin can therefore continue to produce well-functioning skin cells – just as it did when we were young.

## Why it works

In order to get the skin we really want, we must provide the skin with the best possible environment to thrive. That's why DMK doesn't just offer peels, it offers a complete system based on the REMOVE, REBUILD, PROTECT and MAINTAIN philosophy.

Healthy skin requires regular maintenance and this can be done with the use of a personally prescribed DMK Home Prescriptive plan. By checking in for regular treatments and following the at-home skin care regime as prescribed by a DMK technician treatments results of RP can be maintained and enhanced. **acsm**
